Summary

CSE undergraduate with developing expertise in **Machine Learning, AI, Front-End Development, Web Technologies, Database Systems and Competitive Programming**. Currently working on ML-based academic projects involving model training, data preprocessing, and evaluation. Skilled in creating responsive user interfaces, integrating APIs, and building data-driven applications. Strong understanding of programming fundamentals and a growing interest in practical AI implementation and modern web development.

Education

Green University of Bangladesh B.Sc. in Computer Science & Engineering CGPA: 3.05 / 4.00	2022 – Present
Hajiganj Model Govt. College HSC (Science) GPA: 4.90 / 5.00	2018 – 2020

Skills

Programming: Python, C, C++, Java, HTML, CSS, JavaScript, PHP
Tech Areas: Data Mining, Machine Learning, Deep Learning, AI, and Full-Stack Development
Tools: Git, LaTeX, MS Office Suite, Lucidchart, Canva
Soft Skills: Leadership, Communication, Collaboration, Adaptability, Problem Solving
Competitive Programming: Codeforces, CodeChef, AtCoder, LeetCode
Languages: Bangla (Native), English (Fluent)

Experience

Academic & Technical Support (Informal)	Oct 2021 – Jun 2022
- Assisted learners with ICT fundamentals, documentation tools, and introductory programming concepts. - Supported academic tasks involving data handling, presentations, and structured problem-solving.	
Peer Technical Assistance (Informal)	Apr 2023 – Feb 2024
- Supported peers in programming fundamentals using Python, C, and Java, covering syntax, control flow, and basic logic implementation. - Helped debug basic logical and runtime errors in academic-level programs.	

Projects

- ARFF Tree Explorer (Artificial Intelligence):** Developed an interactive tool for exploring ARFF datasets, including data preprocessing, model training, and decision tree visualization. Automated dataset parsing, feature analysis, and model interpretation to support machine learning education.
- Lifeline Charity Platform (Web Application):** Designed a secure web-based charity platform connecting patients, donors, and administrators. Implemented verified case management, role-based access control, and transparent donation tracking.
- Ride Sharing System (Shell Scripting):** Built a command-line ride-sharing system using Shell Script to manage users, rides, bookings, and basic fare operations through structured menus and file-based data handling.
- Blog Website – Online Storytelling Platform**
Developed a dynamic and responsive blog platform supporting post publishing, categorization, pagination, and user authentication. Focused on clean UI design and scalable content management.
- Weather Tic-Tac-Toe (Java Networking & ML Logic:)** Implemented a multiplayer Tic-Tac-Toe game integrating real-time weather API data. Applied Java networking, object-oriented design, GUI components, and rule-based intelligent move logic.

- **University Management System:** Designed and developed an academic and administrative management system supporting user accounts, secure data storage, search functionality, and full CRUD operations.
- **IT Club Management System:** Developed a structured management system to handle member records, event scheduling, resource allocation, and basic financial tracking for organizational activities.

Research (Ongoing)

- **Predicting the Effect of Drugs on Neonates using Machine Learning and Explainable AI**
Conducting research on applying machine learning models to neonatal clinical data to predict drug effects. Integrating explainable AI techniques to ensure model transparency, interpretability, and clinical relevance.

Certifications

- AI/ML/IoT Bootcamp - Bondstein Technologies Ltd. & ICT Division (Govt. of Bangladesh)

Awards

- Best Project Award (Lifeline Charity Platform)- Integrated Design Project, Dept. of CSE, Green University of Bangladesh

Interests

Artificial Intelligence, Machine Learning Applications, Explainable AI, Data-Driven Systems, Software System Design, Competitive Programming Practice, Technology Research, Open-Source Learning
